01044404583

Cairo, Egypt

Mahmoud Basiouny

Mahmoud Basiouny

Summary

Senior Software Engineer (.NET Backend) with **4+ years of experience** designing and developing scalable, event-driven **microservices** and cloud-based solutions using .NET 8, Dapr, and Azure. Experienced in **AI-assisted development** using **Claude Code, OpenAI Codex**, and ChatGPT to enhance productivity and code quality. Strong background in Clean Architecture, distributed systems, performance optimization, and mentoring developers.

Experience

Senior .NET Backend Developer

2024/12 – Present

ThinkTech-IT

Cairo, Egypt

- ***Promoted*** *to Senior .NET Backend Developer in Jan* 2026.
- **Mentor** developers on solution **design** and implementation.
- Conduct **code reviews** and maintain engineering standards.
- Leverage AI-assisted development tools, including **Claude Code, OpenAI Codex, and ChatGPT**, to accelerate feature development, support code reviews, and improve productivity while maintaining code quality and engineering standards.
- Develop and maintain **microservices**-based trading applications as part of the *Borsa* project.
- Design and implement backend services using .NET 8, Entity Framework Core, and **PostgreSQL**, following **Clean Architecture** principles.
- Integrate **Dapr.io** for service invocation, pub/sub messaging, state management, and distributed caching.
- Implement reliable event-driven communication using **NATS JetStream**, **CloudEvents** and **Outbox Pattern**.
- Manage authentication and authorization via **Keycloak**.
- Integrate with external financial protocols such as **FIX** and **TIP**.

.NET Full Stack Developer

2022/01 – 2024/12

Iken Tech

Cairo, Egypt

- Develop and maintain full-stack applications using the .NET framework.
- Implement front-end solutions using **React** and **Next.js**.
- Work with microservices architecture to build modular and scalable applications
- Utilize **Azure Service Bus** for messaging and **Azure CI/CD** workflows for deployment.
- Create and manage **private NuGet packages** for code reuse and maintainability.
- Implement **unit tests** to ensure code quality and reliability.

Education

Bachelor of Computer Science 2017 – 2021
Helwan University Helwan, Egypt
Graduated from the Faculty of Computer and Artificial Intelligence.

CS Major *Very Good*

Skills

AI-Assisted Development
Claude Code, OpenAI Codex, ChatGPT, AI-Assisted Code Review, Prompt Engineering.

Microservices & Distributed Systems
Dapr.io, NATS JetStream, Azure Service Bus, Redis, CloudEvents, OAuth 2.0, Keycloak.

Database
PostgreSQL, SQL Server, MySQL.

Version Control
Git, GitHub, Azure Repos.

.NET & Backend Development
C#, .NET 8, ASP.NET Core, Web APIs, EF Core, LINQ, Minimal APIs.

Architecture & Design
Clean Architecture, Vertical Slice Architecture, Design Patterns, OOP.

DevOps & Cloud
Azure, Azure DevOps, Docker, Docker Compose, Kubernetes, CI/CD.

Frontend
React.js, Next.js, REST API Integration.

Projects

Borsa
A distributed trading platform supporting real-time financial transactions and market integrations.
- Applied **microservices and event-driven architecture** for scalability and fault tolerance.
- Leveraged **Dapr, NATS JetStream, Redis, and Keycloak** for service orchestration, caching, and secure access management.
- Integrated **FIX and TIP protocols** for broker and exchange connectivity.
- Designed and implemented **core backend services** and **shared NuGet packages** to ensure maintainability and observability.

Be Adealer
Multi-tenant e-commerce platform built with .NET Core Web API and React.js.
- Applied **mediator pattern, vertical slicing, and microservices** for modularity and scalability.
- Developed **REST APIs** and **admin dashboard** for product and tenant management.
- Focused on maintainable architecture and optimal system performance.

Online System (Used Cars Platform)
A web platform for users to buy and sell used cars online.
- Implemented CRUD features for car listings using **Laravel, MySQL, HTML, CSS, and JavaScript**.
- Designed and developed backend logic for user registration, authentication, and data management.
